Free 3GP Video Converter Factory is an application that you can use to encode media files to the 3GP and 3G2 format supported by mobile phones. It can be easily used by individuals of any experience level. The interface of Free 3GP Video Converter Factory is clean and pretty intuitive. Media files can be imported into the list by using the file browser only, because the "drag and drop" method is not supported. Batch processing is permitted. In the queue, you can check out the name, duration, output profile, estimated size and status of each file. So, after you establish the output destination and format, you can proceed with the encoding job. But you can also change audio and video properties when it comes to the resolution, bit rate, encoder, aspect ratio, frame rate, channel mode, volume and sample frequency rate. Settings can be saved or restored to their default values. On top of that, you can preview clips in a small, built-in media player and take snapshots, create a new profile, set post-task actions (e.g. exit program, turn off the computer), view file information, set the thread priority and snapshot format, and others.
